

Surfacing

WAINWRIGHT 

Since its launch in 2001 Wainwright Surfacing has prospered and grown into a prominent regionwide road maintenance and civil engineering contractor. Operating with the Company's traditional values at heart, Wainwright Surfacing serves a wide and expanding Client base from Local Authorities to private householders.

The surfacing operation is performed within a disciplined framework of quality management procedures and we are accredited to National Highways Sector Scheme 16 for the assurance of workmanship in the laying of asphalt mixes, which is complemented by the Wainwright material supply holding similar accreditation in National Highways Sector Scheme 14 for the supply of bituminous materials.

Our workforce are all directly employed by us and trained to exceptionally high standards. All operatives have achieved a minimum of NVQ level 2 road building and many are, or have, progressed beyond this. We have company wide Construction Skills Certification Scheme compliance and Foremen and Supervisors gain NVQ level 3 status when working for us.

PRODUCTS

Surfacing

WAINWRIGHT 

Much investment has been made in plant over the last few years and this investment continues. Our very modern, hi-tech paver fleet, in the hands of our highly trained work force, delivers high quality and high capacity output in a safe, organised manner.

To accommodate work load peaks and occasional industry specialisms we have developed a supply chain of companies to add to our delivery. The company, its staff and operatives undergo extensive induction and on-going monitoring to ensure that the high standards we demand of ourselves continue throughout all aspects of our delivery.

The staff at Wainwright Surfacing have the benefit of accumulated industry experience extending back over many decades and we have support systems and staff to ensure the information associated with delivering surfacing schemes and ancillary works is immediately available when required. Working closely with our counterparts in the quarry and at the coating plant gives us great opportunities for innovative, integrated working methods that result in our proven high quality delivery across a wide range of surfacing, civil engineering and ancillary services.
